Welcome to a truly unique model of business education, powerfully fusing world-class academics and meaningful business experience.

With experiential learning at the core, our MBA connects you to the pulse of today’s business world. Your 55-credit program begins with one semester of MBA foundation courses and a career management course. In your second term, your concentration and elective courses begin, which includes opportunities for experiential learning. Your second and final year includes a paid corporate residency that lasts for 3-months, 6 months or up to 12-months, in addition to earning your remaining credits towards your degree.

Reinventing the MBA to meet today’s technological demands.

A truly reimagined business education model, the MBA x Computer Science degree prepares students to lead in a business world driven by digital convergence. This interdisciplinary MBA degree is designed to give students a comprehensive framework in business and leadership combined with technical knowledge and skills in computer science, preparing them to harness technology in a global landscape where intelligent machines are expanding what’s possible. Your degree begins in the fall with one semester of MBA foundation courses and career management classes. In your second semester you’ll start taking classes in your concentrations. You will select one business concentration and one computer science concentration. Your corporate residency will begin in June. You’ll gain MBA-level work experience that challenges and elevates you in ways that make classroom study uniquely richer and expand your comfort zone and your vision.
